# DevonWay Environmental Health & Safety

"Accidents happen," as the saying goes, and in organizations with high safety risks, those accidents can cause injuries, fatalities, and physical damage to facilities and the surrounding environment. The best way to avoid dangerous outcomes is to create a strong safety culture throughout your organization by reinforcing safe practices, encouraging immediate identification of potentially unsafe circumstances, empowering people to take action before incidents occur, and enabling post-incident analysis to improve safety going forward.

Safety culture is easy to define but challenging to implement. It requires programs and systems that not only reinforce safety protocols, but also collect data when safety breaches occur and enable you to see trends and take action to avoid incidents, reduce risks, and minimize the impact and severity of any incidents that do occur. Yet you don't want to introduce inefficient processes. You'll find great examples of strong safety cultures in high-risk industries like nuclear power generation and aviation.

DevonWay EHS Powers Strong Safety Cultures

DevonWay Environmental Health and Safety (EHS) software enables you to create a strong safety culture in your organization without introducing paperwork and inefficient processes. DevonWay EHS has best practices built in based on our extensive experience working with high-reliability industries like nuclear power plants, national labs, and global engineering firms.

Benefits

- **Encourage employees to report unsafe conditions from anywhere**. With DevonWay Mobile Observations, it's fast and easy to enter observations from mobile devices (iOS, Android, Windows), online or offline, so anyone can report incidents and unsafe conditions.
- **Reinforce safety protocols before work starts**. Pre-job briefs on mobile devices, online or offline, provide workers a checklist to review a job's scope and follow steps to make the job safe. Protocols can be adjusted dynamically as situations dictate and performance improvement opportunities can be identified on the spot.
- **Monitor who's at risk and react quickly to changing events**. Keep track of employees who may be at risk of exposure to COVID-19 or natural disasters, so you can proactively assist those who are likely to need help and block non-essential travel to dangerous areas.
- **Comply with regulations and standards.** Ensure compliance with applicable safety, environmental, and hazardous materials regulations, including regional and overlapping regulations, in all locations.
- **Respond rapidly to incidents.** Automated, configurable workflows enable rapid response and compliance with regulations and standards while streamlining processes. With trigger-defined alerts and real-time dashboards, employees get immediate notifications when they need to respond to dangerous conditions.
- **Spot dangerous trends and correct them**. DevonWay reporting and trending helps you identify hot spots and fix them as soon as possible. Non-technical business users can create reports and analyses without IT help, which increases transparency. Automated review workflows ensure nothing falls through the cracks.

Start Anywhere, Scale Safely with DevonWay EHS

DevonWay products are highly configurable, without code, to meet your exact requirements and fit your processes. You can start small and scale up—to more users throughout your entire organization and to complementary products, even those outside of EHS, like Corrective and Preventive Actions, Inspections, and Lessons Learned. Our EHS products include:

- Accidents & Injury Reports
- Chemical Management
- Employee Safety Tracking
- Ergonomic Assessments
- Hazardous Waste Management
- Incident Management
- Industrial Hygiene
- Industrial Safety Events
- Mobile Observations
- Pre-Job Briefs
- Sustainability Management

DevonWay products run in the cloud, hosted, or on premise. They're enterprise-ready and meet the rigorous demands of large and complex organizations like the US Department of Energy, Biogen, GE Healthcare, and Entergy. Most implementations take just a few weeks, and 100% of our implementations go into production, so that's one less risk you need to worry about.

Turn Safety into a Business Advantage

With DevonWay EHS, you can turn safety into a business advantage by implementing a strong safety culture without the overhead of extra paperwork or inefficient processes. For more information, visit us at www.devonway.com, email info@devonway.com, or call 415.904.4000.
